

IBM Account and watson Assistnt Service was lready created during the training

2.Chatbot: Pandemic shop following things are implemented

1.Intent: Enquiry Order, Greetings

2.Entities : Email, Enquiry Greetings

3 Node red Service was Initially installed .But to get more acquaintance uninstalled it and implemented the flow of chatbot by using the file provided by mentor. Download the JSON File of bot and uploaded it on github Repository
Created the Bot demonstration video and uploded on github

Project Description:

Today, because of social distancing and other issues it can be risky for some people to shop for essential items in person. This project helps with this issue by giving people an online option to shop for essentials. With the help of Watson assistant, a chatbot is built. This chat should have the following capabilities:

1. Give the list of items in the Store
2. Should show the prices of vegetables
3. Display if there are any offers or discounts
4. The bot should be able to take details like name, contact number, address, and the items to place the order.

Services Used:

1. IBM Watson Assistant
2. Node-Red
